

MICON CHLOR+SAYF is a Hypochlorous acid solution which is one of the oldest and most effective biocides known to man.

The chemical structure is HOCl. It is produced by white blood cells in the human immune system to kill invasive pathogens and fight infections.

HOCl is proven to be 80-100 times more effective than other sanitisers with proven abilities to destroy bacteria and viruses. Micon Chlor + Sayf is a non-irritant and is gentle on the skin making it the perfect next generation sanitiser solution.

HOCl is the active ingredient in electrolyzed water, which is an industrial technology used for green cleaning and sanitizing. Electrolyzed water is made when an electrical charge is used to change the chemical structure of sodium chloride, purified water & natural acids into an engineered sanitising and disinfectant solution.

Hypochlorous Acid has been approved by the United States Environmental Protection Agency (EPA) and has been listed as - Products with Emerging Viral Pathogens & Human Coronavirus claims for use against SARS-CoV-2 as it is with Norovirus, N1H1, Rhinovirus, Canine Parovirus, Ecoli, etc.

Hypochlorous Acid oxidises (explodes) the cell wall of pathogens causing necrosis (rupturing of the cell). Though viruses are not technically living organisms, they are destroyed by Hypochlorous Acid.

HOCl holds the highest US FDA safety classification possible. Generally Recognized as Safe (GRAS) classification is only given to a product if it is safe to inhale, ingest and apply to the skin.

HOCl is classified as a Food Additive - USA FSIS (Food Safety Inspection Service). The HOCl molecule has been extensively researched and multiple peer-reviewed medical publications refer to its efficacy and safety when used outside of the human body.

HOCl is FDA approved for use in produce preservation and USDA approved for organic crop production.

HOCl is one of the only agents that are both non-toxic to the delicate cells that can heal our wounds while being lethal to almost all known dangerous bacteria and viruses that threaten our health.

SPECIFICATIONS:

Physical Form -	Liquid
Colour -	Colourless
Specific Gravity -	1.01 - 1.05
Fragrance -	Slight chlorine odour
pH (Concentrate) -	4.7-5.7

Tests - SANS 51276:2011 & SANS 51650:2011

ANTI MICROBIAL UP TO 99%

FAST ACTING UP TO 99%
IN 30 SECONDS

ECO FRIENDLY

100 % NATURAL AND NON-TOXIC

Most liquid hand sanitizers contain a large amount of ethyl or isopropyl alcohol. Therefore, they should be stored out of your child's reach and only used with adult supervision.

CHLOR+SAYF

100%
NATURAL

CHLOR+SAYF

When used too frequently, alcohol-based hand sanitizers can wash away your skin's natural oils, which can cause drying and cracking. Dehydrated skin can be unattractive and irritating, it is likely to cause one or more of the following symptoms: Itching, slight to severe flaking, scaling, or peeling, fine lines or cracks, deep cracks that may bleed and dry, cracked cuticles and skin can offer an entry point for germs to enter the body and cause infection.
